

9" Components

Strange Pro Iron Case

Has your stock 9" case or aftermarket "big cap" case with 5/8" cap bolts failed? The Strange 9" nodular iron case is the solution- hopefully before the failure costs you a lot of money. Strange nodular cases are machined from D-4512 nodular iron which is 8% stronger than the nodular which is found in OEM cases. The 8% material strength is only a small portion of the total strength increase a Strange case offers.

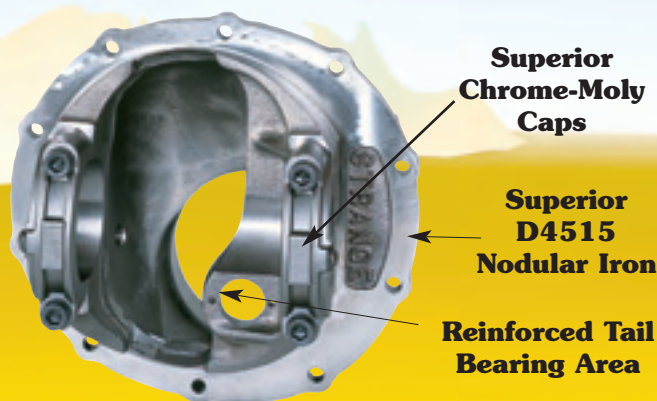

For additional strength the case features:

(1) Chrome-moly bearing caps retained by socket head cap screws that exceed aircraft grade 8 specifications (2) Steel adjuster nuts (3) The pinion pilot bearing has been reinforced with superior D-4512 nodular and additional material (4) All bolt holes are deep tapped and cast with additional material surrounding the OD of the holes (5) Bearing bores and reinforcing ribs are all cast with additional material in critical areas (6) Ribs were carefully designed to further enhance rigidity (7) Spot faced stud holes prevent lubricant leaks and damaged mounting surfaces.

Strange nodular cases are virtually indestructible; therefore, the iron case is recommended for any vehicle which accepts a 9" housing and a 9" gear set.

33.50 lbs.

- **The ease of set-up makes Strange cases the choice of professional installers**
- **20+ years of 9" case manufacturing expertise & proven dependability**
