

DANA 60 & MOPAR 8.75" COMPONENTS

Strange spools are used in a wide variety of race cars to replace heavier and weaker cast iron carriers. Spools allow for both rear tires to always rotate at the same speed. The lighter and stronger steel spool also improves ring and pinion life by providing a more rigid gear mounting. Many rear end problems are caused by deflection of stock cast iron carriers or failure of differential side gears, these problems are eliminated with a Strange spool.
