

Strange Floater Kits & Components

Strange floater kits coupled with a Strange 9"/9.50" Ultra Case assembly have become a standard for Pro Mod classes, Blown classes and other abusive drag racing applications. The Strange floater kit provides excellent safety and durability for sportsman and professional drag racers. Each Strange floater axle kit includes; 8.50" or 13.50" long (see part numbers) 4130 spindles, steel drive plates, aluminum hubs, forged slotted rotors, Timken bearings, seals, chrome-moly studs and steel lug nuts. Caliper kit and axles are available separately. Strange strongly advises the use of 40-spline axles, due to the tremendous increase of torsional strength, in comparison to 35-spline shafts; therefore, Strange only offers 40-spline floater kits. Carbon brake kit upgrade is offered for every Strange floater kit.
