

Strange Pro Race Lightweight Steel and Aluminum Brake Kits

Strange lightweight steel brake kit (B4598WC) mounted on optional Strange Strut

Strange lightweight kits are designed for spindle mount wheels. This kit features the Strange single piston caliper kit. The caliper kit employs a unique slider assembly that features internal Garlock bearings and precision ground sliders to prevent the caliper from binding or sticking, which is common with other brands. The single piston caliper utilizes a square pad that slides freely on our centerless ground bridge bolt, which prolongs pad life.

Each Front Kit Includes: Strange single piston billet calipers, slider assembly, soft square pads, forged steel (unless indicated) slotted rotors, and billet aluminum caliper mounts. *Due to numerous wheel styles our kits do NOT include wheel hubs, wheel bearings and wheel seals- contact your wheel manufacturer.*

B4594WC LW Kit. Fits Funny Car & Altered type spindles (**aluminum** rotors) (10.25 lbs.) (kit)... **\$674⁰⁰**

B4595WC LW Kit. Fits Funny Car & Altered type spindles (weight 16.00 lbs.) (kit)... **\$549⁰⁰**
