

Strange Pro Race Caliper Kits

Strange 4-Piston Caliper Kits

The Strange 4-piston directional caliper accomplishes superior bridge bolt strength at only 2.70 pounds. Strange directional calipers feature 1.750" and 1.625" OD stainless steel pistons to assure optimal pad wear and exceptional pedal/handle feel. Every Strange caliper is internally ported and include .100" square o-rings to assist piston retraction. The coalescing square o-rings provide excellent piston retraction as well as superior fluid retention. Kits include calipers, pads, and necessary hardware.

B1855 (pictured above)
Soft pad (left) replaces metallic pad in B1850 kit

B1850 Caliper kit with soft pads and mounting hardware- fits 5.250" center:center mounts (kit)... **\$344.50**

B1855 Caliper kit with metallic pads and mounting hardware- fits 5.250" center:center mounts (kit)... **\$359⁰⁰**

The Strange 2-piston calipers are manufactured from aircraft quality aluminum and machined to exacting tolerances. This caliper kit is recommended for vehicles weighing under 2,600 lbs.

B1825 Caliper kit with soft pads and mounting hardware- fits 3.250" center:center mounts (kit)... **\$195⁰⁰**

This single piston caliper kit employs a unique slider assembly that features internal Garlock bearings and precision ground sliders to prevent the caliper from binding and/or sticking, which is common with other brands. The caliper body is machined and lightened- satisfying the most weight conscious racer.

B1816 Caliper kit w/soft pads & slider assembly- call for application (kit)... **\$254.44**
