

Strange Pro Race Front Carbon Brake Kits

Strange has developed a new carbon (carbon/carbon) material that has excellent static and non-static characteristics, while still yielding exceptional life. Strange front carbon brakes offer many advantages over front steel and cast iron rotors. The advantages include the elimination of cracked and/or warped rotors, significant reduction in brake drag and a **total brake kit weight @ 8.50 pounds**.

This proven carbon kit features a perfected caliper kit that employs a unique slider assembly, which includes internal Garlock bearings and precision ground sliders to prevent the caliper from binding or sticking. The square carbon pads have a generous surface area allowing for optimum braking.

The Strange front carbon kit is the choice of prominent Fuel Funny Car teams, Competition Eliminator contestants, Pro-Mod and Pro Stock cars- *including Warren & Kurt Johnson.*

Strange Front Carbon Kits include the following: caliper with slider assembly, billet aluminum caliper mounts, 10" carbon rotors and carbon brake pads.

- C4595WC** Fits Strange adjustable height spindles (#S3422) **(kit)... \$2,595⁰⁰**
- C4596WC** Fits LAMB strut **(kit)... \$2,595⁰⁰**
- C4598WC** Fits Strange Aluminum Strut **(kit)... \$2,595⁰⁰**
- C4600WC** Fits Strange Ultra Strut (with anglia style spindle) **(kit)... \$2,595⁰⁰**
