

1994-04 Mustang Front Brake Kit

Strange Engineering has been an innovator in drag racing brakes for over 20 years. From developing lightweight brake components, directional calipers and superior brake pad compounds, they are now proud to introduce the next addition in our vast line of brake kits. The Strange Heavy Duty Front brake kit for the 1994-2004 Mustang features directional 4 piston calipers and a lightweight directional rotor design.

The Strange Engineering front brake kit includes billet aluminum hubs with Timken bearings and billet caliper mounts. When paired with the matching rear brake kit, the Strange brake system provides the most dependable brakes on the market. For more information, visit www.strangeeng.net
